

Hi team,

Greetings of the day! I came across your post about hiring a Frontend Developer at QCentum and am writing this to express my keen interest in this position. However, the position requires to have Angular JS, but my expertise is in React.js

I completed my bachelor's from MediCaps University, Indore in 2023. Following that, I joined Qoruz as a front-end developer in August 2023. I work with React js and Next js on a day-to-day basis. For CSS, I utilize Tailwind CSS to enhance efficiency and reduce coding time.

From the start of my career, I have excelled in developing websites. I manage SEO optimization, performance enhancement, and page load speed effectively. Recently, after delivering a website, I began working on a product platform using Redux Saga, React, TypeScript, API Integrations and CSS.

My freelance experience has equipped me to deliver quality work that drives client growth. Freelancing has also enabled me to build global connections and sharpen my professional skills.

I have been participating in many hackathons, be it online or in-person. I am also experienced in working with an early-stage startup, called Economize as a Technical writer for four months remotely and working closely with the founder.

My tech stack includes JavaScript, React JS, MySQL, CSS3, Tailwind CSS, Git, Github, Vercel, Netlify, Bootstrap, Chakra UI, Material-UI, Next js, and Figma.

I would love to share my profiles below, do check them out:

- [Portfolio](#)
- [LinkedIn](#)
- [GitHub](#)
- [Twitter](#)
- [Peerlist](#)

I find the company and role requirements exciting and am eager to apply and proceed with the next steps. I look forward to discussing how I can contribute as a front-end developer.
